The company

Rexnord is a global company supplying many industries with power transmission and conveying components. The product offering ranges from roller chains, couplings and geared products to conveyor chains, belts and components.

The head office is based in the United States, with several divisions all over the world. The Rexnord FlatTop division is manufacturing conveyor chains, belts and components.

Rexnord is fully committed to meet customer expectations; huge knowledge of the business reduces maintenance costs, eliminates redundant inventories and prevents downtime, all in close co-operation with OEMs and end users. This is a result of Rexnord's focus on product development, application engineering, operations and customer service.

Rexnord FlatTop Europe represents 3 strong brands: Rexnord, MCC and Marbett.

With production facilities in 's-Gravenzande and Correggio, sales offices in The Netherlands, Italy, France and Germany, a large sales group for local service in many countries and distributors all over the world, Rexnord is always close to its customers. In this way a fast and reliable delivery is guaranteed.

Rexnord chains and belts are being used to convey a wide variety of products: bottles, cans, boxes, crates, tires, loose food, glass jars, PET containers, trays; shortly every transport in production halls in virtually any industry.

The product range has been split up over two catalogues, one for Rexnord/MCC Table Top/MatTop chains and one for Marbett conveyor components.

The industries served

As the handling specialist in the field of conveying, the Rexnord product portfolio is providing solutions for complete lines in several industries in order to improve productivity.

In beverage industry palletizers, depalletizers, washers, labelers, fillers, pasteurizers, inliners, outfeeds, elevators and accumulation tables are equipped with slatband chains, curves, sprockets, belts, bearings, leveling elements and many more conveyor components.

For the container manufacturing industry special products and materials are available, such as abrasion resistant polyamide for glass plants, vacuum chains for can making and gripper chains for vertical transport.

For food industry applications modular belts and components with Microban antibacterial protection are used in deboning, grading and trimming lines for meat, poultry and seafood. A wide range of products is also offered for blanchers, cookers, washers, coolers and processing lines in fruit, vegetables, bakery, confectionary etc. And many more products are available for the handling of packed food.

In automotive industry the products are engineered to meet the most demanding applications, such as rubber processing and tire handling.

This is just a short selection of the applications in which Rexnord products are being used. Among others they have also found their way into pharmaceutical production lines, battery manufacture, paper and cardboard production.

Rexnord and MCC TableTop chains and MatTop belts

The product line can be split up into:

- Steel slatband chains

In various materials ranging from carbon steel to special stainless steel with better wear and sliding properties; types straight running, sideflexing tab, bevel and Magnetflex, with and without rubber top.

- Plastic slatband chains

Wide range of materials and various executions; single hinge, double hinge, heavy duty, vacuum, lbp rollers and rubber top.

- Plate Top and Gripper chains

Based on the Rexnord roller chains in both stainless and carbon steel; Plate Top chains have steel or plastic top plates; Gripper chains have different types of rubber inserts.

- Case conveyor and Multiflex chains

Different types of acetal for both straight running and sideflexing transport of products varying from heavy crates to small juice packs.

- Curves

Magnetflex, Tab and bevel, as well as straight tracks to support the chain in all parts of the line; there are many standard versions besides the ability to make any special curve needed

in your applications with short delivery times.

- Modular belts

Pitches differ from 0.5 to 2.25 inch to suit any application. Most series have both closed and open top executions; some also available with rubber top for inclined conveying.

Marbett conveyor components

The product line can be split up into:

- Chain guide components

Profiles, corner tracks, straight tracks, return rollers, serpentine, plugs for connections.

- Product handling components

Guide rails, roller guides, guide rail clamps, guide rail brackets and connecting clamps in plastic or stainless steel.

- Frame support components

Side mounting top brackets, bearing heads, support bases and connecting joints, stainless steel components.

- Supporting and leveling elements

Different versions in steel and plastic, articulated and fixed, with and without gripper bottom and vibration absorbing feet.

- Self-aligning bearings

Square, oval, pillow block, side flange, take-up, round, and other executions, all with open and closed unit. Lubricated for life versions are also available.

- Miscellaneous components Line control elements, hinges, locks, knobs, modular transfer roller plates, rollers, tensioners, nozzles, cable carriage chains, shaft collars and nose-over bars.

STEEL SLATBAND CHAINS

In 1938 Rexnord introduced the worlds first metal slatband chain with integrated top plate and hinge eyes. Nowadays the Rexnord and MCC product lines of steel slatband chains offer many materials, types and grades, enabling a solution for any application. Steel slatband chains are ideal for handling glass bottles, PET containers, kegs, crates and many other products.

FEATURES

- Roughness

When products are sliding on a chain, the bottom will affect the roughness of the chain. Rexnord tests have shown that during the first days after installation the initial roughness is changing to a lower level that is maintained during the normal life of the chain. Roughness is a valuable feature, although it is not the determining factor between good and great performance.

- Sliding properties

These depend on the base material and the treatments during the manufacturing process. To ensure superior sliding properties, Rexnord uses a number of patented chain materials, specifically designed for slatband chain applications. You can find more details on these materials on next page.

- Flatness

During the entire production process the flatness is measured in running direction (R) and in width direction (W).

The flatness in width direction is important when products slide sideways from one chain to the other. For this reason the cross sections of all Rexnord and MCC chains are convex instead of concave, to prevent products to fall. Due to the careful control in production, these chains offer superior lateral flatness values, which can be found in the tables on the page of each chain.

Flatness when a product moves from one link of the chain to the next is also important, as poor flatness will cause products tipping, leading to production loss in the line. MCC and Rexnord steel slatband chains offer an outstanding flatness in running direction.

- Working load

At which load a chain is actually breaking is not relevant to determine if a certain chain is suitable for your application. More important is the maximum working load a chain can handle before permanent deformation occurs. Rexnords chain calculation program will assist in defining the right chain for specified applications, considering conveyor length, chain speed, accumulation level, lubrication, product type and weight.

- Ground finish

Certain customers prefer steel slatband with ground finish for its sliding properties. The specification table on the product page of each chain indicates whether a chain surface finish is ground or non-ground.

- Polished hinge eyes

The performance of the chain on high-speed side-transfers, such as pressure-less combiners improves with polished hinge eyes, due to the smooth contact with the wearstrips. This prevents pulsating of the chain and improves product handling. Most Rexnord sideflexing chains have polished hinge eyes, because these are always in contact with the curve. The specification table of each chain indicates whether a chain has polished hinge eyes.

STEEL SLATBAND CHAINS

PROGRAMME

Steel slatband chains are available in the following materials:

REXNORD	
SSC/SSR	OPTI-Plus patented alloy of ferritic chrome nickel stainless steel, offering high strength and great wear resistance. These chains feature a ground surface and are fitted with pins in AISI 431 (1.4057) material
SS 805/815/881	Austenitic chrome nickel stainless steel with properties similar to 18/8 material, offering good chemical resistance. These chains are fitted with pins in austenitic stainless steel
SS 802/812	Ferritic chrome stainless steel for general purposes, offering a mix of good wear life and high strength. These chains are fitted with pins in AISI 431(1.4057) material
S/SC	Thorough hardened carbon steel, very suitable for glassworks and other dry, abrasive applications, offering extremely high working loads and superior wear resistance. These chains are fitted with hardened carbon steel pins
SSB	Austenitic stainless steel with a very high chemical resistance for corrosive environments where strong acids or bases are present. As SSB is nearly non-magnetic it is used in applications where magnetism of the chain can cause malfunctioning of the system. It is fitted with austenitic stainless steel pins
Rexnord chain description starts with the material, followed by an 8.. number for the type and finally the width K. For example SSC 8811 TAB-K450 is an Opti-Plus sideflexing TAB 4½" wide chain.	
MCC	
10-Series	Specially treated 17% chrome ferritic stainless steel for general applications, offering a long wear life and high strength, together with good sliding properties. It is fitted with pins in AISI 431(1.4057) material
60-Series	Special chrome nickel ferritic stainless steel for heavy duty and high-speed applications, requiring very smooth transfer of (unstable) products. It is offering superior sliding properties and the highest working loads. These chains are fitted with pins in AISI 431(1.4057) material
66-Series	Special chrome nickel ferritic stainless as 60-Series, however for the pin a patented material is used, offering unmatched wear life in abrasive applications, resulting in dramatic improvements of life time
MCC chain description starts with the material, followed by an S for straight running, M for Magnetflex, B for bevel or T for tab side-flexing chains, followed by the width and finally the execution: S for Slideline, M for Max-Line and R for Rubber. For example 60 S 31 SM is a 60-series straight running 3¼" wide chain with Slideline and Max-Line.

STEEL SLATBAND CHAINS

PLASTIC SLATBAND CHAINS

From standard low friction to specialized high-tech materials for very specific applications, the Rexnord plastic TableTop range is capable of delivering a wide range of solutions for conveyor applications for virtually any industry.

FEATURES

- High strength materials

For dry running and lubricated beverage applications and also for abrasive applications in glass works, special materials are available, offering high PV resistance or very low friction.

- Sliding properties

To ensure superior sliding properties, Rexnord uses a number of patented chain materials. In many cases these materials are especially defined for conveyor applications. All different materials have friction coefficients tailored to the intended application.

- Flatness

The design of the mould and the control of the production process take care of flatness values meeting the highest standards. Together with the optimum sliding properties, this will prevent tipping of the products conveyed.

- Standardization

In case handling a number of different chains are used. Standard chains (XL, LF, HP) are used for general conveying of cases, trays or crates. High friction versions (Rubber Top, SuperGrip) are used for inclines and declines or on stopper belts. Version with rollers (LBP) are used in lines feeding palletizers in order to reduce the backline pressure and noise. The wide product range allows standardization of case handling conveyors, as a result of the same sprockets, track width, return rollers, return design, wearstrips and hinge width, also in co-operation with stainless steel (60 M 75 and 60 S 75). If plastic modular belts are used for straight running, sideflexing chainbelts are ideal for conveyors with 85 mm pitch; FGM 1050, FT 1050 and FTM 1060 match with 1000- and 8500-series, FTM 1055 and FT 1055 with 1005- and 7700-series. These chains feature a maximum support area and excellent transfers, even in small radii. For demanding applications FGM/FTM Magnetflex versions are recommended, whilst the FT tab versions are intended for less critical circumstances.

- 84 mm wide chains

Rexnord offers a complete range of both plastic and steel chains with 84 mm width, intended for the global beverage standard 85 mm pitch between the lanes of multi-lane conveyors. In plastic chains the straight running SHP84 and the sideflexing RHMP84 are companions, running on the same sprockets. The gap between the different tracks/lanes is minimized compared to the traditional 3.25" chains as well as the gap between the links of the chains, to offer superior product handling and minimize the risks of products falling.

- D-pins

SHP, RHMP, 1060, 1055, 879, 880 and 882 chains have D-style pins. Once assembled, the pin retention is done by means of geometrical fit instead of mechanical tension on the hinge eyes. This makes the chain less sensitive for attack by chemicals; it also allows (dis)assembly from both sides of the chains, reducing the chance of error.

PLASTIC SLATBAND CHAINS

PROGRAMME

Plastic slatband chains are available in the following materials:

REXNORD/MCC	
XL	Acetal with low friction, to reduce wear up to 15% over plain acetal; intended for high output applications at moderate to high speeds for general conveying.
LF	Low Friction acetal (POM) and special blend of lubricants. This can reduce wear up to 15% over plain acetal; it is intended for high output applications at moderate to high speeds for general conveying.
HP	High Performance internally lubricated acetal (POM), capable of reducing wear up to 40% over plain acetal; intended for dry running or reduced lubrication and high-speed applications.
PS	Platinum Series internally lubricated acetal (POM). It can decrease wear by 5 times. PV-limits are increased, which means that a sideflexing chain moulded in PS can run 2 times faster than the same chain in acetal and 1.5 times faster than in HP. PET bottles running on PS chains exhibit the lowest friction available, to reduce product backline pressure and minimize pulsations.
WX	Polyamide composite to extend chain wear life in abrasive circumstances up to five times compared to acetal materials; to be used in glass handling applications where abrasive shards of glass can wear other plastic chain materials rapidly; it is also applicable when the chain is subjected to sand and dirt.

Anti-static and chemical resistant materials can be supplied for a limited number of chains. Please ask Customer Service for more details.

CHAIN MATERIAL	APPLICATION				
	Mass handling	Inliner standard	Inliner / PET / high-speed	Abrasive wet	Abrasive dry

For plastic chain series: 1108

The drive sprocket is fixed by mounting a pin radially through sprocket and shaft.

1108 plastic chains also run on standard $\frac{1}{2}$ " pitch roller chain sprockets that meet ANSI 40.

- contour symmetrical: no difference between carry and return corner disc							
- opened by breaking out diaphragm							

See page 76 for explanation.

MULTIFLEX AND CASE CONVEYOR CHAINS

The product program offers a wide range of Rexnord multiflex chains and MCC case conveyor chains. These chains are intended for single lane product handling in a variety of applications.

FEATURES

- Multiflex chains

These chains use a unique pivot to connect the hinge pin with the chain link. In standard sideflexing chains the pin and hinge have to deal with horizontal rotation, due to the sideflexing of the chain in the curve, and with vertical rotation of the hinge, when moving over the sprocket. The pivot uncouples these movements, as the hinge pin is only involved in the rotations because of the chain links moving over the sprocket. The pivot can rotate inside the chain link, allowing sideflexing in a curve. Due to the pivot, multiflex chains are ideally suitable for running through multiple curves.

- Armor Clad

The 1700 multiflex chains are also available with a hardened steel cover, the Armor Clad AC 1700 K. Because of this cover the chain is very suitable to convey parts with a high temperature that could damage a plastic chain surface. The steel cover gives the chain an excellent wear life, to make it suitable for part handling in automotive and similar applications.

- Safety

The ZeroGap 1765 multiflex chain has a patented top plate design. The chain surface stays closed when the chain is running through a curve or over a sprocket.

The 1710 K and 1713 K multiflex chains also offer surfaces preventing people's fingers to be trapped if larger products have to be conveyed.

- Case conveyor chains

These chains have a very robust design, making them ideally suited for tough applications, such as case and crate handling. They are very open to deal with the often abrasive debris in these kinds of applications. The conveyor design for these chains can be very simple, resulting in a very economic solution for the sometimes very long distances empty or full crates and cases have to be conveyed in a production line.

- Pin design

Both Multiflex and Case Conveyor chains have chain links characterized by two legs. The pins have a special design to prevent opening up of these link legs. This results in a high allowable working load.

- Corner discs

For multiflex and some sideflexing slatband chains, corner discs can be used to reduce the friction in the curves, allowing a multitude of curves within one conveyor. The use of corner discs is mainly found in conveyors with low-speed part handling in dairy applications, automotive part handling, tobacco industry, etc.

The N880 drive corner disc with a toothed contour is used to drive the chain, integrating sprocket and curve function in the corner disc. This means that no return section for the chain is needed, making the conveyor design more simple and economic. In this kind of conveyor design however the amount of pitch elongation due to wear that can be absorbed is limited. The disc is mounted on the drive shafts by means of a clamping device, for which standard machine components can be used.

The carry disc is used in the upper part of the conveyor, contacting the chain in the normal position when it is conveying products. The return disc is used in the return part of the conveyor, contacting the chain when it is in the upside-down position.

The ball bearing types of corner discs are recommended for high-speed and high-load applications; ball bearings are not included. In all other applications corner discs with thermoplastic bushings can be used.

An open corner disc is mounted on the shaft which needs to run through the disc. A closed corner disc is mounted on top of the shaft. Some closed versions, such as 880BO, offer the ability to break out a diaphragm in the closing cap.

MULTIFLEX AND CASE CONVEYOR CHAINS

PROGRAMME

Multiflex and case conveyor chains are available in the following executions:

REXNORD MULTIFLEX CHAINS	
1765	ZeroGap 50 mm pitch chain without gaps if sideflexing or running over a sprocket; low noise and long wear life
1757	1.5" pitch chain with unique top plate design, ideal for extruded aluminum modular conveyor designs, commonly used for part handling applications; also available with rubber top
1700	Basic 50 mm pitch chain when using corner disks; available in 3 versions: standard, with tabs and with hardened steel top surface (AC1700K)
1702	Basic 50 mm pitch chain; bidirectional and FDA-approved for direct food contact
1720	50 mm pitch chain for irregular cardboard containers; bidirectional and smooth edges
1710	1700 Base chain with round top plates for a uniform and continuous surface, also in curves
1713	1700 Base chain with wide top plates riveted to the chain; the links overlap even in tight corners, so there are no gaps causing safety issues
MCC CASE CONVEYOR CHAINS	
CC 600	Standard chain; available in straight running and sideflexing executions
CC 631	Standard chain with higher links; available in sideflexing execution; can be supplied with pusher
CC 1400	Reinforced chain; available in straight running and sideflexing executions
CC 1431	Reinforced chain with higher links; available in sideflexing execution

PLATE TOP AND GRIPPER CHAINS

Rexnord has a wide variety of Plate Top and Gripper chains. The roller chain based Plate Top is developed for greater loading capacity and permits even higher speeds and longer runs than slatband chains. The roller based Gripper is perfect for product elevating, lowering, rinsing, sterilizing and inverting, by means of soft rubber gripper elements. The base chain is made of steel or stainless steel.

FEATURES

- Plate Top chains

These chains permit a huge loading capacity, higher speeds and longer runs with a single drive. The straight running 843- and the 1843-series have a roller base chain ANSI 40. The 12.7 mm small pitch reduces the sagging effect and permits the use of smaller sprockets. They are recommended for step by step positioning.

The straight running 1864- and 963-series have a roller base chain ANSI 60. The sideflexing 1874-, 1873-, and 3873-series have a roller base chain Side Bow ANSI 63 SB. They are also very suitable for step by step positioning.

Plate Top chains fitted with steel top plates are designed for abrasive and heavy duty or high-temperature conditions. 963-, 1873-, and 3873-series, with "snap-on" plastic top plates combine the benefits of a plastic conveying surface with those of a precision roller base chain: less slip-stick, high working load and accurate positioning; the replaceable top plates are clipped on to the protruding pins.

- Gripper chains

Main applications of Plate Top Gripper chains can be found in glass works. However, they can be used in various other situations, such as crate handling and can manufacturing. Typical Gripper solutions are omegas for easy crossing of production lines, all lifting and lowering with Gripper chain elevators. The grippers are provided in 2- or 3-finger grippers for smaller products and in D-type Grippers for other applications.

- Connection links

All roller based chains are supplied in 10 ft sections and provided with a connection link, so that the chains can be coupled very easily.

- Sprockets

Plate Top chains don't require special sprockets. Standard ANSI 40 and 60 sprockets will fit; therefore they are not part of Rexnord's standard offering.

PLATE TOP AND GRIPPER CHAINS

PROGRAMME

PLATE TOP	
1864	Straight running chains with steel top plates, suitable for heavy loads, long distances and high speeds. The chain consists of a base roller chain with welded on top plates in various steel alloys. The gap between the plates is 1.6 mm wide
963	Straight running chains with plastic overlapping top plates, therefore a uni-directional travel. The continuous surface facilitates stability and eases operations with unstable products
843	Straight running chains with plastic overlapping top plates, clipped on the protruding pins. Uni-directional travel
1843 TAB	Sideflexing tab chains with plastic top plates. Same construction as 843
1874 TAB	Sideflexing chains with steel "snap-on" top plates to form a continuous flat conveying surface. Hold-down tabs provide positive retention in curves and inclines. They will be used in abrasive and heavy duty or high-temperature conditions
1873 TAB	Sideflexing chains with plastic top plates; bi-directional travel. Also available with a rubber, anti-slip insert for inclined conveying up to 25°. The TAB guides permit to continue either from an inclined run to a plain one or vice versa
3873 TAB	Sideflexing chains with plastic top plates for a continuous surface, even in tight radius. Perfect for transport of trays. The Polycarbonate top plates are extreme resistant against impact
GRIPPER	
1874 TAB	Fitted with steel top plates for abrasive or high-temperature conditions. The base is a standard roller chain Side Bow ANSI 63 SB. The gripper elements are available as GD (smooth pad) and GJ (grooved pad); as clipped on they are easily replaceable. The clip for the TAB guide is riveted on the top plate. The heavy duty execution can handle higher loads, resulting in an increased tensile strength by 15%, and permits reduced stretching during operation. The heavy duty design of the top plates implies that guide and top plate are a single unit
1843 TAB	Fitted with thermoplastic top plates for a quieter and smoother operation; these mini-gripper chains enable reduction of plant weight, increase of conveying speed and dry service. The base is a standard roller chain Side Bow ANSI 43 SB. The clipped on gripper elements are available as GD (smooth pad) and GJ (grooved pad). These chains are specially suited for conveying ampoules, test tubes and other minute products, such as small industrial components
1873 TAB	Fitted with thermoplastic top plates for a quieter and smoother operation, enabling reduction of plant weight, increase of conveying speed and dry service. The base chain is a standard roller chain Side Bow ANSI 63 SB. GSD/GS2J/GS3J grippers are clipped on for easy replacement, GDB/GJB grippers are resistant to bending and GJM grippers are integrated in the top plate, ideal for packaging applications
The chain description consists of respectively the material, type, a K number for the plate width in inches, a G for grippers and a code indicating the gripper execution: D for D-style grippers, providing a smooth pad or flat surface; J for grooved path, in some cases combined with the number of gripper fingers per link. Finally S means a special rubber gripper assembly system, resistant to bending. M stands for an integrated gripper, moulded into the top plate, ideal for packaging applications.

CURVES AND STRAIGHT TRACKS

For steel and plastic sideflexing chains Rexnord offers the corresponding curve profiles. Without a doubt Magnetflex® is worldwide seen as the superior curve system. The programme also includes curves and straight tracks for Bevel and TAB chains.

Magnetflex® system

The MCC Magnetflex system has become the worldwide standard in the beverage industry. The great advantages of this patented system have made it the choice of the worlds leading OEMs. It is a Combi system for both plastic and steel chains. Magnets underneath the track hold the chain down in a reliable way.

Magnetflex is the only system where two magnets cover almost the complete base of the curve instead of just the track. Because the magnets are connected by a steel plate, a very broad magnetic field is being formed. Unlike other magnetic curves this results in a force that keeps down plastic chains with steel pins just as well as steel chains. Another advantage is that this magnet position only has a slight reduction in hold-down force when the chain is being lifted, in case of pollution or broken glass, without jumping from the track. Where in other systems the chains can block and jam in the curve profile due to pollution, in the Magnetflex system the chain simply lifts slightly and keeps on running. The magnets are placed in the curve at fixed angles instead of at fixed distances to make sure that no pulsation effect is being created by the magnets, when a chain is being pulled through the curve.

MAGNETFLEX CURVE WITH 2 MAGNETS FOR BETTER HOLD-DOWN OF THE CHAIN

USUAL MAGNETIC CURVE WITH ONLY 1 MAGNET

The magnets make sure that all chains lie perfectly flat in the curve without tilting. In other systems the chain tension is causing the chain to use up the play in the chain guidance, causing chain edges to lift. Especially in multiple-strand curves and with high-speed conveying this means product toppling.

Another big advantage of the Magnetflex system is the easy installation of the chains and the perfect cleanability of the system. This is due to the open and rectangular track in the curve. The chains can easily be installed from above as if the curve was a straight part of the conveyor. Also the chains can easily be lifted from the track for maintenance and cleaning, without breaking the chain or even removing it from the conveyor construction.

Magnetflex curves can be installed in the conveyor frame in different ways. The upper and return part can be supplied bolted together and with inserts to mount the assembled curve into the conveyor frame. The option most often used in multiple track curves is to deliver the upper and return part separately. They are then mounted against a conveyor crossbar. In this case both upper part and return part are equipped with inserts and/or holes. In both build-in options the hole and inserts can be standard or customer specific.

UPPER AND RETURN PART BOLTED TOGETHER

UPPER AND RETURN PART MOUNTED AGAINST A CROSS BAR

Most Magnetflex curves are equipped with a return guide shoe. This machined shoe is meant to bring the chain at the right level to enter the return part of the curve. The position of the return guide shoe is determined by the design of the return part (level or staggered) and by the chain type. A staggered design is used when the pitch between the tracks is too small to allow the chains to run at the same level in the return. In that case two levels of tracks are made in the return part: one level in which the uneven tracks (1, 3, 5 etc.) run and one in which the even tracks run. The height of a staggered return part (usually 63 mm) is always higher than that of a non-staggered return (usually 55 mm).

RETURN PART AT SAME LEVEL

STAGGERED RETURN PART

CHAINBELTS

A special execution of a Magnetflex curve is a CIP (Cleaning in Place) curve, equipped with spraying nozzles and tubes. It is opened up as much as possible to allow good cleaning of the steel or plastic chain and curve profile from the inside of the curve. The CIP curve can be integrated in an existing CIP system.

CURVES AND STRAIGHT TRACKS

Magnetflex curves are available in four different materials. The standard material, Combi-A, is a high grade of polyethylene. It is suitable for most lubricated applications with steel and plastic chains. In clean environment and with low chain speeds Combi-A can also be used in dry running applications. For dry running applications with plastic TableTop chains Combi-L and Combi-S are recommended. These materials are able to work with higher chain speeds. Combi-S has the largest application field, where Combi-L offers better noise reduction. Rexnords calculation program determines the PV (pressure-velocity) load on the curve in a specific application and will advise in which application load and speed require Combi-L or Combi-S curves. For lubricated, abrasive applications (filler discharge) or abrasive, dry running applications (glassworks) with (stainless) steel chains, Combi-G is most suitable. This ceramic reinforced polyethylene offers an extremely good wear resistance.

FROM LEFT TO RIGHT: COMBI-A, -S, -G AND -L

CURVE MATERIAL	APPLICATION						
	Lubricated, clean, stainless steel chains plastic chains	Lubricated, abrasive, stainless steel chains	Lubricated, abrasive, plastic chains	Dry running, low speed, abrasive, steel chains	Dry running, low speed, clean, plastic chains	Dry running high speed, clean plastic chains	Dry running, high speed, abrasive, plastic chains

Tab and Bevel

In many industry segments Tab and Bevel curves and straight tracks are an economic solution if stability of the product conveyed, cleanability and ease of installation are not the key areas of interest. They are available for TableTop, Multiflex and Plate Top chains. Tab and Bevel machined profiles retain the chains in a mechanical way. For these tracks a high grade, wear resistant polyethylene is used. As a standard they are black, but in special circumstances they can also be made in the materials for Magnetflex curves.

The tracks are supplied according to the industry standard dimensions, with a separate (most common) or combined upper and lower part. Both parts can be installed separated by a conveyor cross bar, or using inserts from the side. Tab and Bevel descriptions, such as KTU013 500 1, indicate respectively type, radius and number of strands. The code number includes both upper and return section.

Customized curves

There are over 50 standard executions for different chain widths, chain types, chain pitches, materials, in- and outfeed lengths and hole/insert patterns. If these standard versions do not meet specific conveyor needs, it is possible to order customized versions. For this the following parameters must be defined: Chain type and width, basic width (width of a single track curve), radius (until the center of the first track), in- and outfeed length (straight section before and after the curve), pitch between the tracks, angle of the curve, number of tracks, height of the upper part, height of the return part, size and position of any holes, size and position of any inserts and insert size of any return shoe. Both standard and customer specific curves can be supplied in just several working days.

MAGNETFLEX CURVES

SELECTION TABLES

Select your curve by reading the tables from left to right. You'll find more information on the specified pages.

For chain type(s)	Radius R mm	Pitch P mm	Basic width B mm	Infeed length L mm	Total height H mm	Version number	See page

All these Magnetflex curves include a return guide shoe, except C7. Inserts are optional; M8 or M10 inserts in the return part and M6 or M8 inserts in the guide shoe can be supplied according your detailed drawing. If you need a special Magnetflex curve, following parameters are necessary:

1. Basic width
2. Radius
3. Infeed length
4. Pitch
5. Angle
6. Number of tracks

For tab and bevel curves see page 123-128.

PLASTIC MODULAR BELTS

With a large variety of MatTop executions and materials Rexnord has got a conveying solution for virtually any application, especially in combination with the huge TableTop chain programme. The MCC brand has set a standard for modular conveyor belts in beverage industry and now the cleanable designs and specific accessories make several Rexnord MatTop series very suitable for food industry as well. Also in many other industries, such as container making, pharmaceutical and automotive, lines are equipped with Rexnord modular belts.

MatTop modular belts offer a reliable drive concept, using Rexnords great experience in chain drive technology. The design of both belt and sprocket make a perfect combination meeting high standards for tooth and belt engagement, belt release from the sprocket and allowable elongation. Rexnord and MCC modular belts are also known for their clever pin retention systems, which make them very easy to install and maintain.

- MatTop modular belts

The range of MatTop modular belts varies from 1/2-inch small pitch sideflexing executions to 2 1/2-inch pitch straight running heavy duty solutions. The different series are offered in many variations to suit any application:

• Solid Top/Flat Top

A fully closed surface is used if products require maximum support, due to their vulnerability or instability, and if small particles, such as broken glass, bolts and nuts, bones or the product itself, could get stuck in the surface of the belt, possibly damaging or jamming the product or the belt.

• Perforated Top/Flush Grid

An open area surface is used to allow water- or airflow through the belt and to remove debris, making sure the contact surface between the belt and the conveyed product stays clean. Pollution is washed out in a regular cleaning program. The open area varies per belt type.

• Raised Top/Raised Rib

If (unstable) products need to be conveyed onto or from a belt or chain, Raised Top belts and fingerplates are suitable. The fingers of the transfer plate reach into and below the surface of the ribs of the belt.

Fingerplates are available with longer and shorter fingers; short fingers are normally used in case of a risk of broken glass.

• Vacuum Top

Vacuum conveyors are mainly used for can making or empty can handling in beverage plants. Small holes in a Solid Top belt enable to handle the empty cans by means of a vacuum underneath the belt.

• Rubber Top/SuperGrip

On inclined and declined conveyors packs or crates can be handled smoothly using surfaces with rubber, moulded on top of a specially prepared module using either over-moulding or 2-component technology, ensuring 100% secure bonding. Rubber Top modular belts can be used up to an angle of 20 degrees, depending on the pack style and material.

• Low Backline Pressure (LBP)

Handling accumulated products (cardboard cases, shrink-wrapped packs, flat based crates, tires, etc.) LBP belts are the best choice. LBP1005 modular belts are recommended for shrink-wrapped packages without solid (cardboard) base and small packages, while LBP7703 is the best choice for (cardboard) cases, shrink-wrapped packs with a cardboard bottom and larger products. Both executions guarantee optimum product protection and low noise operation.

• Sideflexing

This belt range offers a solution for almost any curved application.

- Metric and imperial widths

Most belt series are available in either metric or imperial widths. Metric width has developed as the standard of the (European) beverage industry, following the standard 85 mm pitch between different strands of slatband chains. This enables a high level of standardization between TableTop and MatTop conveyor design. Imperial widths, mainly used in the North American market, are the standard in many applications outside (European) beverage industry.

- Positrack guiding system

In several MatTop series Rexnord offers Positrack or Tab guiding. This system consists of two lugs underneath the belt, offering an easy way to guide it in the conveyor. Positrack has advantages if lateral forces apply, as on side transfers of beverage containers and products entering from the side otherwise. The system retains the belt on the conveyor frame without the need for additional wearstrips at the sides. The lugs are usually situated on one side only (double Positrack) allowing for belt expansion without interfering with the accurate guiding of the belt.

- Dynamic Transfer System (DTS/FreeFlow)

The DTS option makes it possible to construct self-clearing 90-degree transfers on which no products are left behind, avoiding the use of dead plates. A narrow DTS or FreeFlow belt is often used next to the main conveyor belt. Due to the constant moving belt underneath the product, pressure between the products, and therefore noise and product damage, is minimized in comparison with dead plate transfers. This system is available on 1500-, 8500-, 1000-, 1005- and 7700-series.

- Flights and sideguards

In several series flights and sideguards can be selected. Due to the great variety in positioning of these accessories these belts don't have fixed codes. On the product page a table is added explaining the possibilities; examples are given how to make a description for the desired product configuration.

*For different colours of similar materials (e.g. BSA, BHA, etc.) the same recommendations apply.
Not all materials are available in each belt series, but for specific applications the best materials are chosen.

500-SERIES MODULAR BELTS

The 500-series 1/2-inch pitch belt offers the smallest pitch available in the market. This pitch makes this belt very suitable for handling small or unstable products requiring small inline transfers, such as infeed conveyors of packaging equipment and can manufacturing. As a standard the belts are supplied in low friction acetal.

FEATURES

- Perfect product handling due to very small pitch ensuring smooth operation and low friction acetal.
- The small 12.7 mm pitch reduces chordal action and permits the use of small or no dead plates at inline transfers.
- Rounded outside edges for better side transfers and improved product handling.
- Pin retention system with clips allows easy pin access for installation and maintenance.

PROGRAMME	
500 Flush Grid	16% Open area; this guarantees optimum water- and airflow and allows pollution to fall through and maintain a clean contact surface between products and the belt; suitable for amongst others can making and can processing
Positrack	Small lugs on one or both sides of the belt, to ensure a superior guiding of the belt even on long conveyors and at side transfers. Positrack is also recommended on 85 mm wide single track belt executions

1500-SERIES MODULAR BELTS

The 1500-series 15 mm pitch belt helps to eliminate container tipping and jam-ups at conveyor transfer points. These belts are designed to enable smooth inline nose-over and 90° transfers. 1500-series is available in open, closed and rubber top executions, of which last two in both imperial and metric widths. As a standard the belts are supplied in high-performance acetal and high-temperature resistant polypropylene for beverage applications and in materials with antibacterial protection, especially for direct food contact and high-risk food processing environments.

FEATURES

- The 15 mm pitch in combination with the curved underside of the belt reduces chordal action and permits the use of very short transfer plates or no transfer plates at all.
- The small pitch ensures perfect product handling, even for the most vulnerable products.
- Practical plug pin retention system allows easy installation and maintenance; metric executions have orange plugs, imperial versions have a yellow pin retention.
- Belt and sprocket design ensure optimum engagement and a reliable, bi-directional drive.

PROGRAMME	
1505 Flat Top	Closed surface; suitable for (instable) glass and PET containers and otherwise vulnerable products
1506 Flush Grid	26% Open area for optimum water- and airflow; suitable for amongst others can handling
1505 SuperGrip	Rubber Top for inclined and declined conveyors with packs and for metering applications; Positrack and 44 mm side-indent possible. Standard angles up to 20°
DTS	Single module Dynamic Transfer System for left- or right-hand self-clearing 90° transfers to avoid dead plates; as a standard equipped with Positrack guiding
Positrack	Lugs for accurate guiding of the belt in the conveyor (metric execution and DTS only)
Belt accessories	Flights and sideguards for special applications in food industry (imperial executions only)

8500-SERIES MODULAR BELTS

The 8500-series $\frac{3}{4}$ -inch pitch belt has several strong design features, making it suitable for amongst others beverage, packaging and food industry. The small belt pitch ensures a smooth operation. 8500-Series is available in a closed and an open execution. Mold-to-width executions are available with Tab guides for single line applications. As a standard the belts are supplied in high-performance acetal and in food grade polypropylene.

FEATURES

- Perfect product handling due to the small pitch and superior low friction HP material. The stiffness of the modules results in an optimum belt flatness.
- The small 19.05 mm pitch reduces the chordal action and permits the use of short transfer plates.
- Rounded outside edges for better side transfers and improved product handling.
- Twist-lock™ pin retention by means of a hinged plug prevents plug loss and allows easy pin access for installation and maintenance.
- 8500-Series belt is companioned by FTM 1060, FGM 1050 or FT 1050 chainbelts, to make a perfect match between straight running and sideflexing conveyors.

PROGRAMME	
8505 Solid Top	Closed surface and high strength make it suitable for both glass and PET containers
8506 Perforated Top	22% Open area for optimum water- and airflow; suitable for amongst others can making and can processing environment
DTS	Single module Dynamic Transfer System for left- or right-hand self-clearing transfers to avoid dead plates at 90° transfers; as a standard equipped with Positrack guiding
Belt accessories	Flights, sideguards and hold-down tabs for special applications in food industry; accessories only available in WHT polypropylene

STANDARD	WHT 8505	I8505WHTKxx	5 to 105	5 to 105	16000	5.96	25

* In code numbers xx corresponds with the belt width (A). Standard widths of these belts begin at 6", with 6" increments up to 120"; special widths begin at 2 1/3" with 1/3" increments.

If you require flights, sideguards or tab guides, please describe the belt by choosing from the options listed in the **2nd column** of the table:

Material	HP or WHT	See page 204
Belt type	8505	
Width (A)	K.. (in inches)	Belts with flights have a minimal width of 6"
Flights	F3 or F2 or F1 or H..	Standard height of 3", 2", 1" or special height in mm
Pitch between flights	T..P	Flights on every .. th row; with sideguards it must correspond to an even number of rows
Flight side-indent	N.. (in inches)	Minimal 1 1/3" with 1/3" increments; in case of sideguards indents 1 1/2" or 2 1/4" only
Sideguards	SG2 or SG1	Standard height of 2" or 1"
Tab guides	TAB1 or TAB2	TAB1 is only one row; TAB2 is two rows
Distance between Tabs	D..	Minimal 3" with increments of 2/3"
Pitch between Tabs	D..P	Must correspond to an even number of rows

Example: HP 8505 K16 1/3 F3 T4P N2 1/3 TAB2 D3 D4P is a 8505 Solid Top belt, made of dark grey acetal, width 16 1/3", 3" high flights on every 4th row at 2 1/3" from the sides, no sideguards and 2 rows of tabs with a distance in-between of 3" on every 4th row.

5930-SERIES MODULAR BELTS

The 5930-series ¾-inch pitch belt is intended for light to medium loads in can manufacturing, can handling and food industry applications. The belts ensure a smooth operation. 5930-Series is available in a closed and an open execution. As a standard the belts are supplied in polypropylene and acetal.

FEATURES

- The 19.05 mm pitch reduces chordal action.
- The small pitch permits the use of short transfer plates.
- Smooth edges and closed hinges ensure perfect product handling.
- Pin retention by means of one plugged end module and one blind end module.
- 5930-Series belts with flights, sideguards and hold-down tabs have been replaced by 8500-series; this series is identical in pitch, thickness and standard widths.

PROGRAMME	
5935 Solid Top	Closed surface; suitable for PET containers and otherwise lightweight products
5936 Perforated Top	16% Open area for optimum water- and airflow; suitable for amongst others can making and can processing
5935 Vacuum Top	Solid Top execution with small holes for amongst others vacuum conveyors in can manufacturing lines; supplied upon request

1000-SERIES MODULAR BELTS

The 1000-series 1-inch pitch belt combines strong design features with an all-round pitch, making it a versatile belt; it is suitable for amongst others beverage, packaging and food industry. Mold-to-width executions are available with Positrack guiding for single line applications and packaging machines. 1000-Series can be equipped with flights for food industry applications. As a standard the belts are supplied in low friction acetal and polypropylene for beverage and in materials with antibacterial protection, especially for direct food contact and high-risk processing areas.

FEATURES

- Versatile 1-inch pitch and the rigid cross-rib design result in optimum flatness and therefore superior product handling.
- The clip pin retention system in combination with the 2 module system makes the belt very easy to install and maintain.
- Rounded outside edges for better side transfers and improved product handling.
- 1000-Series belt is companioned by FTM 1060 and FGM 1050 or FT 1050 chainbelts, to make a perfect match between straight running and sideflexing conveyors.

PROGRAMME	
1000 Flat Top (FT)	Closed surface; suitable for both glass and PET containers due to high strength. The absence of gaps prevents small (glass) particles to jam in the surface of the belt; the fully closed surface gives maximum support to the products conveyed
1000 Flush Grid (FG)	40% Open area; this guarantees optimum water- and airflow and allows pollution to fall through and maintain a clean contact surface between products and the belt. Suitable for amongst others can making and can processing
1000 Raised Rib (RR)	40% Open area; in combination with the special Click-Comb fingerplates the Raised Rib surface creates smooth transfers on accumulation tables, (de)palletizers and discharge tables
1000 Raised Rib narrow (RR)	13% Open area; suitable for packaging machines
1000 Raised Rib Railtrack (RRR)	1000 RR narrow belts with Railtrack, for optimum guiding and economic conveyor set-up
1000 SuperGrip (SG)	High friction rubber surface to handle packages on inclined and declined conveyors. Standard angles up to 20°
FreeFlow	Dynamic Transfer System for complete elimination of dead plates at 90° transfers, creating self-clearing transfers
Positrack	Lugs for accurate and reliable guiding of mass handling and single track belts, resulting in optimum product handling
Belt accessories	Flights to handle bulk food stuff on inclined and declined conveyors; fingerplates RR 1000 and RR 1000 narrow for precise transfers

1005-SERIES MODULAR BELTS

The 1005-series 1-inch pitch heavy-duty belt combines a 1/2-inch thickness with a robust belt design and an all-round pitch, making it a versatile belt for amongst others beverage, glass manufacturing and packaging applications. As a standard the belts are supplied in low friction acetal, extremely wear resistant polyamide and polypropylene.

FEATURES

- Robust belt design and high strength to meet the most demanding applications in beverage, glass making and packaging.
- The revolutionary Easy Lock pin retention system in combination with the 2 module system makes the belt very easy to install and maintain.
- Rounded outside edges for better side transfers and improved product handling.
- 85 mm pitched fixed sprocket positions improve the drive properties and contribute to standardization of the conveyor design.
- Equipped with wear resistant polyester (PBT) pins for the best long term performance.
- 1005-Series belts are companioned by FTM 1055 or FT 1055 chainbelts, to make a perfect match between straight running and sideflexing conveyors.

PROGRAMME	
1005 Flat Top (FT)	Closed surface; suitable for heavy duty glass handling applications and other abrasive environments
1005 SuperGrip (SG)	Execution with high friction rubber surface to handle packages on inclined, declined and metering conveyors; standard angles up to 20°. Special design of the rubber profile makes it suitable for crate handling as well
1005 LBP	Low Backline Pressure execution with low noise rollers, securing optimum handling of vulnerable packed products, such as shrink-wrapped trays with and without cardboard bottom
FreeFlow	Dynamic Transfer System allows complete elimination of dead plates at 90° transfers, creating self-clearing transfers
Positrack	Lugs for accurate and reliable guiding of mass handling and single track belts, resulting in optimum product handling

Split sprockets with keyways are 'tight fit' onto the shaft and can be used for belt widths up to 680 mm and temperature differences of max. 30°C. For wider belts or bigger temperature differences, square bores have to be used.

Square sprockets can be used on the drive- and on the idler shaft. They 'float' freely on the shaft.

1010-SERIES MODULAR BELTS

The 1010-series 1-inch pitch belt is designed to meet the increasing demand from food processing industry for improved hygiene and better cleanable products. It is meant for light to medium duty applications, where cleanability and hygiene have got the highest importance. It can handle meat, poultry, seafood, fruits and salads after being cut or processed otherwise. As a standard the belts are supplied in food-grade materials with antibacterial protection, especially for direct food contact and high-risk areas.

FEATURES

- When turning over a small roller the hinges open, exposing a large pin surface, offering excellent cleaning possibilities. The hinge design is extremely open and accessible, so a large surface of the pin and the inside of the hinge can be cleaned directly. The bottom of the module is curved, improving drainage and reducing drying time of the belt after cleaning.
- Using a moulded pin with T-shaped head keeps the pin in a specially designed eccentric outer hinge eye. This makes the belt easy to operate for maintenance and cleaning.
- The belt is supplied mould-to-width up to 24 inch, avoiding adjacent surfaces between the modules. The hinges are 1/2 inch wide, reducing the number of adjacent surfaces in-between.
- Fully closed machined sprockets, ideal for cleaning. Due to the double teeth rows the sprockets are bi-directional and easy to position.
- As a standard antibacterial protection incorporated for direct food contact.

PROGRAMME	
1015 Solid Top	Closed surface; it offers the best support to vulnerable products and prevents loss of small products
Belt accessories	Flights to handle bulk food stuff on inclined and declined conveyors. They are ribbed on both sides, improving the release properties against sticky or frozen products. The flights can be positioned until the side of the belt or with a 1-inch side-indent on any pitch required. Other side-indents on request. Flights will be supplied upon request

7700-SERIES MODULAR BELTS

The 7700-series 1-inch pitch heavy-duty belt is used for a large variety of applications. Because of its robust design these belts are common for glass works and automotive industry. 7700-Series is available in a closed, two open, a rubber top and a LBP execution. For single lane conveying several mold-to-width executions with Tab Guides are available. For applications in glass works and beverage industry the Dynamic Transfer System is a proven solution. As a standard the belts are supplied in high-performance acetal and polypropylene.

FEATURES

- Robust 1/2-inch thick module design means very high strength.
- HP acetal reduces friction, offers excellent wear resistance and creates dry-running possibilities.
- Rounded outside edges for better side transfers and improved product handling.
- Twist-lock™ pin retention by means of a hinged plug prevents plug loss and allows easy pin access for installation and maintenance.
- Dynamic Transfer System (DTS) creates smooth 90° transfers.
- Belt and sprocket design ensure an optimum engagement and a reliable drive.
- 7700-Series belts are companioned by FTM 1055 or FT 1055 chainbelts, to make a perfect match between straight running and sideflexing conveyors; 1055 can also be driven by NS 7700 sprockets.

PROGRAMME	
7705 Solid Top	Closed surface; for heavy-duty glass and PET applications metric version can optionally be equipped with Positrack
7706 Perforated Top	8% Open area; for amongst others can handling
7708 Perforated Top	20% Open area; for amongst others warmers and coolers
7705 Rubber Top	For inclined and declined conveyors up to 20°; available upon request
7703 LBP	Low backline pressure execution with large staggered, low noise and low friction rollers to allow careful conveying and accumulation of packs and cases
Positrack	Tabs for accurate guiding of the belt in the conveyor (metric execution and DTS only)
DTS	Single module Dynamic Transfer System for left- or right hand self-clearing transfers to avoid dead plates at 90° transfers; as a standard equipped with Positrack guiding

5700-SERIES MODULAR BELTS

The 5700-series 1½-inch pitch belt is a medium-duty belt for can, PET and glass container handling in beverage industry. It is a good choice for retrofitting TableTop slatband chains towards MatTop modular belts, often used on (de)palletizers and mass handling conveyors. 5700-Series is available in a closed and an open execution. As a standard the belts are supplied in acetal and polypropylene.

FEATURES

- The 38.1 mm pitch matches that of a TableTop chain pitch, enabling easy retrofits, due to similar sprocket sizes.
- Smooth edges and closed hinges ensure perfect product handling.
- The 5700-series is a direct replacement for 4700-series, offering several advantages; they run on the same sprockets and are interconnectable; flights of 4700-series are suitable for 5700-series as well.
- Pin retention by means of one plugged end module and one blind end module.
- Bricklaid pattern improves belt robustness and facilitates maintenance and assembly.
- Increased surface area on bottom side results in a longer wearlife.

PROGRAMME	
5705 Solid Top	Closed surface; suitable for handling of glass, cans and PET containers
5706 Perforated Top	16% Open area for optimum water- and airflow; suitable for amongst others can making and can processing environment
Belt accessories	Flights for special applications in food industry

6300T-SERIES MODULAR BELTS

The 6300-series 50 mm pitch hybrid belt combines the features of steel and plastic components with the advantages of a real modular system. The new 6300T series offers a brick-layed pattern in combination with a reusable pin retention system. In combination with flights and sideguards this belt is a common choice for the food industry. As a standard the belts are supplied in polypropylene and polyethylene.

FEATURES

- Fully plastic product support surface due to the cleverly positioned tension plates underneath the belt surface.
- 6391 and 6392 belt modules are diamond-shaped, resulting in a minimum contact area with the product, with little risk of product sticking to the belt surface.
- Easy to operate pin retention system.
- 6300T-series is strongly recommended for high-temperature applications, such as cookers and blanchers.
- High strength and good dimensional stability due to stainless steel frame of tension plates and pins; no large pitch elongation occurs because of thermal expansion during operation.
- Completely flush modules and edges.
- Bricklaid pattern improves belt robustness and enables easy maintenance and assembly.
- 6300T-Series belts are a replacement for the original 6300-series offering important advantages with respect to pin retention and product handling. 6300T and 6300-series run on the same sprockets. For replacement purposes 6300-series can still be obtained.

PROGRAMME	
6390T Solid Top	Closed surface; suitable for handling small and large products without product loss and where no drainage is required
6391T Perforated Top	26% Open area and the fine mesh make it suitable for applications with very small products requiring good drainage or airflow capabilities, such as blanchers, cookers and coolers
6392T Perforated Top	48% Open area for optimum water- and airflow; due to the bigger gaps it is intended for larger product particles; also suitable for blanchers, cookers and coolers
Belt accessories	Flights for special applications in food industry

2000-SERIES MODULAR BELTS

The 2000-series 2-inch pitch belt is typically used in heavy-duty applications, such as pasteurizers, palletizers and accumulation tables. The modules are designed with rigid cross ribs and the multi-angular sprockets support the modules optimally. As a standard the belts are supplied in high-temperature and chemical resistant polypropylene.

FEATURES

- Pin retention by means of clips for easy installation and maintenance.
- Cross rib design creating a high stiffness of the modules to handle huge product loads and taking care of a flat surface for optimum product handling.
- Superb product handling from and onto the belt by using DTS-C transfer system in combination with Raised Rib 2000.

This system consists of a static fingerplate combined with a moving DTS or FreeFlow belt. The belt is positioned in the surface of the DTS-C fingerplate, enabling self-clearing transfers; this is important if changing from one product batch to another in a filling/processing line and if “hot-filled” products should not stay on the infeed transfer of the cooler. The DTS-C transfer eliminates sweepers for better line efficiency. The DTS belt in the system and the chain or belt on the main infeed or outfeed conveyor are supported by the same central wearstrip on the fingerplate, saving installation time and avoiding conveyor height adjustments.

PROGRAMME	
2000 Flat Top (FT)	Closed surface; for large and heavy products
2000 Flush Grid (FG)	31% Open area; this guarantees optimum water- and airflow and allows pollution to fall through; suitable for amongst others food and automotive applications
2000 Raised Rib (RR)	30% Open area; ideal for pasteurizer applications, warmers and coolers. This standard RR execution is meant for can or flat-based PET handling
2000 Raised Rib Heavy Duty (RRHD)	27% Open area; reinforced to deal with the difficult conditions in (one way) glass pasteurizers and dual purpose applications (cans and bottles)
Positrack	Lugs in Raised Rib executions for reliable and accurate tracking of the belt in pasteurizer tunnels, allowing optimal use of the belt surface
Fingerplates	DTS System for self-clearing transfers, standard click-comb for cans and click-comb for glass applications, resulting in precise transfers

2010-SERIES MODULAR BELTS

The 2010-series 2-inch pitch belts can be used in a large variety of food applications. These belts are used on deboning and trimming lines as well as medium- and heavy-duty elevators. Due to the various executions and the large range of accessories, a tailor-made solution for each food handling application is possible. All 2010-series belt materials are standard equipped with antibacterial protection for direct food contact.

FEATURES

- The modules are flush all around and do not have closed or hidden pockets. Especially the large open area between the rows of hinge eyes underneath the belt offer very good accessibility for cleaning. The rod retention area is very easy to clean and because of the absence of rims or hidden areas there is no risk of dirt and debris accumulating.
- This belt is very easy to assemble or disassemble, due to the integrated locking system. With a screwdriver the rod retention finger can be positioned in either the 'locked' or the 'unlocked' position.
- The extended hinge eyes underneath the belt provide a large footprint, reducing contact pressure and wear. The connection of the hinge eyes with the top plate is very rigid, giving the belt excellent impact resistance. The large rod diameter also means less pressure and wear reduction in the hinges.
- The design of the sprocket and the belt has been optimised to ensure an excellent drive, up to the maximum working load of the belt during its whole life. The machined sprockets have excellent strength and cleanability.
- As a standard equipped with antibacterial protection.

PROGRAMME	
2015 Solid Top	Closed surface; allows cutting and deboning on the belt surface; it offers the best support to vulnerable products and prevents loss of small products
2016 Perforated Top	20% open area; this allows optimum drainage and airflow in combination with good product support due to the rectangular slots
2011 Textured Top	Small nubs prevent sticking of soft and frozen products and sliding on the belt surface
Belt accessories	Straight and curved flights and sideguards for elevators, lowerators and other food applications

* Code numbers in the table correspond with 6" wide belts and go up with 1 (e.g. 844.03.11, 844.03.12 etc.) for each standard 2" increment (8", 10" etc.) up to 120". Optionally 2/3" increments possible.

If you require flights or sideguards, please describe the belt by choosing from the options listed in the **2nd column** of the table:

Material	WLA or BLA or WHA or BHA or WSA or BSA	See page 204
Belt type	2015	
Width (A)	K.. (in inches)	Belts with flights have a minimal width of 8"; smaller upon request
Flights	F1 or F2 or F3 or F4 or F5 or F6 or H.. C4 or C6 RF2 or RF3 or RF4 RC4 or RC6	Straight; standard height 1" to 6" or special height in mm Curved; height 4" or 6" Ribbed straight; height 2", 3" or 4" Ribbed curved; height 4" or 6"
Pitch between flights	T..P	Flights on every .. th row
Flight side-indent	N.. (in inches)	Minimal 1 1/3" with 2/3" increments; sideguards are situated at 1/3" from the flight, reducing the indent by 2/3"; if side-indent is 1 1/3", sideguards are directly besides the flight, reducing the indent by 1/3"
Sideguards	SG2 or SG3 or SG4	Standard height of 2", 3" or 4"

Example: BHA 2015 K18 RF2 T6P N4 SG3 is a 2015 Solid Top belt, made of blue polypropylene with Microban, width 18", 2" high straight ribbed flights on every 6th row at 4" from the side and 3" high sideguards.

5990-SERIES MODULAR BELTS

The 5990-series 2¼-inch pitch heavy-duty belt is mainly intended for long and wide conveyors in different segments of the automotive industry. The closed surface of the 5995 execution and the high load capability allow the handling of people and cars in assembly lines and car wash applications. As a standard the belts are supplied in high-performance acetal.

FEATURES

- High load capacity up to 51000 N/m.
- Specially designed underside for equally distributed load and wear between the belt and the wearstrip, resulting in a long wearlife.
- Pin retention by means of one plugged end module and one blind end module.
- Available in black BSM and for clear moving belt edge indication in red/black BRSM acetal.
- Superior drive technology also under high loading, due to specific belt pocket and drive sprocket design.
- Indented pushers available for car wash and automotive applications.

PROGRAMME	
5995 Solid Top	Closed surface; suitable for automotive and people moving applications
Belt accessories	T1-Inch and T2-inch pushers available upon request

HS suitable for hot and humid applications.

4800-SERIES MODULAR BELTS

The 4800-series 2¼-inch pitch belt is perfectly suitable for large accumulation tables, pasteurizers, coolers and warmers. Different designs of finger plates ensure an optimum transfer from and onto the Raised Top surface of the belt. As a standard the belts are supplied in acetal and polypropylene.

FEATURES

- High strength.
- Finely spread rib pattern offers good support to a large variety of PET bottles and other instable products.
- Different design of the fingerplates ensures an optimum transfer from and onto the belts.
- Other solutions for pasteurizers, coolers and warmers are series RR 1000, RR 2000, SR 2500.

For 4809 belts sprockets of 5990-series are used. See page 187

2500-SERIES MODULAR BELTS

The 2500-series 2½-inch pitch belt is intended for heavy-duty pasteurizing. The high working load permits application in heavily loaded glass pasteurisers. The total system, the module design, the transfer fingers, the sprockets and the pin retention system have been designed to cope with the harsh environment of glass pasteurizers. As a standard the belts are made of yellow reinforced polypropylene; the transfer plates are made of the same material in green-blue.

FEATURES

- The surface of the belt is designed to handle broken glass without interference with the long term performance of the belt. The special design optimizes water flow and prevents glass particles from getting stuck. Besides the solid ribs are designed to withstand the high forces that might be generated by broken glass.
- The curved bottom of the slots between the ribs ensures an optimum contact with the finger transfer system, unaffected by the chordal action of the belt. This allows the fingers to push glass particles from the slot bottom to leave the system. If damaged, the fingers can be replaced individually.
- The fingers are grouped in a transfer block which allows them to slide and follow the expansion and contraction of the belt.
- The Easy Lock pin retention allows easy installation and maintenance of the belt.

PROGRAMME	
2500 Solid Rib	The 20% open area combines optimum drainage with perfect support for the bottles. The ribbed design prevents broken glass to jam in the surface of the belt as with conventional Raised Rib designs
Positrack	Guiding lugs beneath the belt for accurate tracking of the belt in pasteurizer tunnels over the full length, allowing optimum use of the belt surface
Fingerplates	Transfer system for easy loading of products from and onto the belt

SIDEFLEXING MODULAR BELTS

The sideflexing belts range exists of 1/2-inch pitch 505, 1 1/4-inch pitch 1200 and 1 1/4-inch pitch 7956 belts, offering a solution for almost any curved application. As a standard the belts are supplied in low friction acetal for beverage and in acetal or polypropylene with antibacterial protection, especially for direct food contact.

FEATURES

- In compliance with the industry standards, three curve guiding systems are offered:

RBP uses beveled Positrack lugs underneath the belt to guide the belt in the curve. The lugs run against a beveled strip, retaining the belt in the curve. This system enables easy removal of the belt from the conveyor for cleaning or maintenance. The conveyed product can be wider than the belt width as there is no wearstrip on top of the belt to hold it down.

RBT guiding uses Tabs underneath the belt to hold the belt down while running through the curve. Often the tabs can also be used to hang the belt in the return part of the conveyor. Depending on the construction modular belts with tabs are more difficult to remove from the conveyor for cleaning and maintenance.

RB (Flat belt without Tabs or Positrack) is suitable for the conventional guiding method, supporting the belt on its inner radius. The belt is held down in the curve by a wearstrip on top of the belt or by running through a U-channel. This method can also be applied in the return part. In this way it is difficult to remove the belt from the conveyor. The RB executions are also suitable for low-tension spiral applications.

- Belt and curve guiding materials have a PV (Pressure/Velocity)-limit determining the maximum speed or load in a specific application. Rexnords calculation software and engineering manuals will advise concerning the feasibility of a specific application.

PROGRAMME	
505-Series	For small packed products and loose foodstuff; combines a small internal radius with minimum inline transfers and an open area of 10%; available in RBP and RB
1200-Series	For food, beverage, packaging and other industries. Combines a 39% open area and cleanable design with a surface optimized for product support. There are several types: • 1255 standard execution; available in RBP and RB; RBT upon request • 1255 SuperGrip with rubber for inclined and declined applications; available in RBP and RB • 1265 combines standard 1255 inner modules with specially designed outer end modules with TAB and special sliding blocks for huge loading, high-speed possibilities; available in RBT on the outer radius, the inner radius can be equipped with RBP, RBT and RB • 1275 combines standard 1255 outer modules with specially designed inner modules, creating a compact radius design from 1.2 collapse factor upwards; available in RBP, RBT and RB • 1285 combines the 1265 outer and 1275 inner modules for high strength, high speed and compact design. RBT guiding on the outer radius, the inner radius can be equipped with RBP, RBT and RB
7956-Series	For large and heavy products in beverage and food environment; the minimum internal radius is 2 times the belt width and the 16% open area surface offers maximum product support; available in RB and RBT; ball-bearing executions upon request
Belt accessories	Flights on 1255 for inclined and declined applications in food industry

HOLD-DOWN TABS

BALL BEARINGS

7956 can be equipped with ball bearings at the side of the flexbelt, dramatically increasing conveyor length and speed capability. The ball bearings can be situated at either left or right hand side, for clockwise (CW) or counter-clockwise (CCW) traveling direction, or at both sides (s-turn) creating S-Turn possibilities.

MATERIALS

Product	Material chain	Material pin
STEEL SLATBAND CHAINS		
10-series	AISI 430 (Werkstoff-Nr. 1.4016) special 17% chrome stainless steel for improved corrosion resistance, wearlife and strength	AISI 431 (Werkstoff-Nr. 1.4057)
60-series Star	Special chrome-nickel stainless steel for excellent sliding properties, improved corrosion resistance, long wearlife and high strength	AISI 431 (Werkstoff-Nr. 1.4057)
66-series	Special chrome-nickel stainless steel for excellent sliding properties, improved corrosion resistance, long wearlife and high strength	Ultra wear resistant stainless steel
SSC SSR	OPTI-Plus patented alloy of ferritic chrome-nickel stainless steel, for high strength and great wear resistance	AISI 431 (Werkstoff-Nr. 1.4057)
SS 805/815/881	Austenitic chrome-nickel stainless steel with properties similar to 18/8 material, offering good chemical resistance	Austenitic stainless steel
SS 802/812	Ferritic chrome stainless steel for mix of good wear life and high strength	AISI 431 (Werkstoff-Nr. 1.4057)
S SC	Thorough hardened carbon steel, for glassworks and other dry, abrasive applications, offering extremely high working loads and superior wear resistance	Hardened carbon steel
SSB 815	Austenitic stainless steel with a very high chemical resistance for corrosive environments where strong acids or bases are present. As nearly non-magnetic it is used in applications where magnetism of the chain can cause malfunctioning of the system	Austenitic stainless steel
Rubber top	Special elastomere with a hardness of 70 Shore A	
PLASTIC SLATBAND CHAINS		
XL	Internally lubricated, extra low friction acetal for improved wearlife and high strength. Colour: light brown	AISI 431 (Werkstoff-Nr. 1.4057)
LF	Low Friction acetal (POM) and special blend of lubricants for reduced wear up to 15% over plain acetal; intended for high-output applications at moderate to high speeds. Colour: light brown	AISI 431 (Werkstoff-Nr. 1.4057)
HP	High Performance internally lubricated acetal (POM), for reduced wear up to 40% over plain acetal; intended for dry running or reduced lubrication and high-speed applications. Colour: grey	AISI 431 (Werkstoff-Nr. 1.4057)
PS	Internally lubricated polyacetal for high-speed applications, improving wear life. Colour: grey	AISI 431 (Werkstoff-Nr. 1.4057)
WX	Polyamide composite for extended wear life in abrasive circumstances up to five times compared to plain acetal; to be used in glass handling applications and when the chain is subjected to sand and dirt. Colour: light green	AISI 431 (Werkstoff-Nr. 1.4057)
D	Acetal with higher friction and wear resistance; economic alternative. Colour: grey	AISI 431 (Werkstoff-Nr. 1.4057)
LBP	Wear resistant, extra low friction XLA-acetal with special selflubricating additives. Colour: anthracite Rollers are made of special wear resistant and sound absorbing plastic; colour: aubergine. Roller shafts: stainless steel AISI 304 (Werkstoff-Nr. 1.4301)	AISI 431 (Werkstoff-Nr. 1.4057)
SuperGrip	Wear resistant polyester. Colour: anthracite. Rubber top material: special elastomere with a hardness of 70 Shore A. Colour: aubergine	AISI 431 (Werkstoff-Nr. 1.4057)
XLG	Internally lubricated, extra low friction acetal for improved wearlife and high strength; FDA approved. Colour: green-blue	AISI 431 (Werkstoff-Nr. 1.4057)
MULTIFLEX AND CASE CONVEYOR CHAINS		
HP	High Performance internally lubricated acetal (POM), for reduced wear up to 40% over plain acetal. Colour: grey	Stainless steel
LF	Low Friction acetal (POM) and special blend of lubricants for reduced wear up to 15% over plain acetal. Colour: light brown	Stainless steel 1700 K: zinc plated stainless steel
WX	Polyamide composite for extended wear life in abrasive circumstances up to five times compared to plain acetal. Colour: light green	Stainless steel
WLF	Low Friction acetal (POM) and special blend of lubricants for reduced wear up to 15% over plain acetal. Colour: white	Stainless steel 1700 K: zinc plated stainless steel
AC	Armor Clad acetal with hardened steel top plates	Zinc plated
Corner disc - hub	Reinforced polyamide HP low friction acetal (ND 1700 FL/TR); brass (880)	
XL	Internally lubricated, extra low friction acetal for improved wearlife and high strength. Colour: light brown	AISI 431 (Werkstoff-Nr. 1.4057)
NC	Wear resistant, special acetal. Colour: white	AISI 301 (Werkstoff-Nr. 1.4310)
BL	Acetal. Colour: blue, RAL 5005	AISI 301 (Werkstoff-Nr. 1.4310)
PLATE TOP CHAINS		
Base chain	Standard: Carbon steel SS: Stainless steel	
Top Plate	LF acetal (POM) and special blend of lubricants for reduced wear up to 15% over plain acetal. Colour: light brown HP internally lubricated acetal (POM), for reduced wear up to 40% over plain acetal. Colour: grey WX Polyamide composite for extended wear life in abrasive circumstances up to five times compared to plain acetal. Colour: light green WPC Polycarbonate offering resistance to product dropped onto the chain. Colour: white	

MATERIALS

Product	Material belt	Material pin
PLASTIC MODULAR CONVEYOR BELTS		
XLG	Internally lubricated, extra low friction acetal for improved wearlife and high strength; FDA approved. Colour: green-blue	Polypropylene 505: special reinforced plastic RR narrow 1000, 84, 1005, 1255 and 7956 belts: polybutylenterephthalat (PBT)
XP	Wear resistant polypropylene with excellent long term heat stability – up to 104°C – and a very good chemical resistance; FDA approved. Colour: light green	Polypropylene
XP SuperGrip	Wear resistant polypropylene with a very good chemical resistance. Rubber top: special elastomere, hardness 40 Shore A. Colour: light green and black	Polybutylenterephthalat (PBT)
XLG SuperGrip	Wear resistant acetal with a high strength. Rubber top: special elastomere, hardness 50 Shore A. Colour: green-blue and black	Polypropylene (1000-series) PBT (1005-series)
AS	Acetal with improved electrical conductive properties, reducing the build-up of static electricity. Colour: black	Polypropylene
XLA	Internally lubricated, extra low friction acetal for improved wearlife and high strength. Colour: anthracite	Polybutylenterephthalat (PBT)
YP	Wear resistant polypropylene with excellent long term heat stability – up to 104°C – and a very good chemical resistance. Colour: yellow	Polypropylene
YPR	Wear resistant reinforced polypropylene with excellent long term heat stability – up to 104°C – and a very good chemical resistance. Colour: yellow	Reinforced polypropylene
PS	Internally lubricated acetal for high-speed applications, improving wear life. Colour: grey	Polypropylene (1000-series) PBT (1000 narrow and 1005)
WLA	Polyethylene with Microban antibacterial protection for low temperature applications; high impact resistance. Colour: white	Polyethylene
BLA	Polyethylene with Microban antibacterial protection for low temperature applications; high impact resistance. Colour: blue	Polyethylene
WLT	Polyethylene for low temperature applications; high impact resistance. Colour: white	Polyethylene
WHA	Polypropylene with Microban antibacterial protection for high temperature applications. Colour: white	Polyethylene
BHA	Polypropylene with Microban antibacterial protection for high temperature applications. Colour: blue	Polyethylene
WHT	Polypropylene for high temperature applications. Colour: white	Polypropylene
BHT	Polypropylene for high temperature applications. Colour: blue	Polypropylene
WSA	Acetal with Microban antibacterial protection for high pressure and high speed, due to the hard surface; good abrasion resistance. Colour white	Polyethylene
BSA	Acetal with Microban antibacterial protection for high pressure and high speed, due to the hard surface; good abrasion resistance. Colour: blue	Polyethylene
WX	Polyamide composite for extended wear life up to five times compared to acetal materials; to be used in glass handling applications where abrasive shards of glass can wear other materials rapidly; it can also be used in applications where the belt is subjected to sand and dirt. Colour: light green	Polybutylenterephthalat (PBT)
HP	High Performance internally lubricated acetal (POM), for reduced wear up to 40% over plain acetal; intended for dry running or reduced lubrication and high-speed applications. Colour: grey	Polypropylene
HT	Polypropylene for applications with high temperatures; good chemical resistance. Colour: beige	Polypropylene
BSM	Acetal with high resistance against wear and superficial damage. Colour: black	Polypropylene
BRSM	Acetal with high resistance against wear and superficial damage. Colour: black with red end modules	Polypropylene
DTS-C transfer	Super tough reinforced polyamide, wear and abrasion resistant, extra high strength. Colour: black	
Finger transfer 2500	Mounting block: MCC 1001; high grade mix of UHMWPE. Colour: black Fingers: Reinforced BPR-Polypropylene. Colour: green-blue	
Profile fingerplates 1000/2000	Stainless steel AISI 304 (Werkstoff Nr. 1.4301)	
Fingerplate 4809	PA FV reinforced polyamide	
Wearstrip MCC 3500	Special lubricated polyamide for superior PV-rating. Colour: grey-black	
Wearstrip MCC 3600	Polyester based plastic for direct food contact; FDA-approved. Colour: white	

MATERIALS

Part	Material
CURVES	
Upper part of Combi-A and CIP-curves	MCC 1200, ultra high molecular weight polyethylene, for optimum wear and abrasion resistance with a molecular weight exceeding 9 million g/mol. Colour: aubergine
Upper part of Combi-G curves	MCC 2000, ultra high molecular weight polyethylene, with specially integrated ceramic additives, for superior abrasion resistance with a molecular weight exceeding 9 million g/mol. Colour: green-yellow
Upper part of Combi-S curves	MCC 3500, special polyamide for optimum wear resistance in dry running lines where plastic chains run at high speeds. Colour: sulphite grey
Upper part of Combi-L curves	MCC 3000, ultra high molecular weight polyethylene, for noise reduction and high PV limits with a molecular weight exceeding 9 million g/mol. Colour: light blue
All return parts	MCC 1002, high grade mix of ultra high molecular weight polyethylene, for good wear and abrasion resistance with a molecular weight exceeding 3-7 million g/mol. Colour: black
Cover plates	Stainless steel AISI 430 (Werkstoff Nr. 1.4016)
Screws	Stainless steel
Inserts (optional)	Brass
Return guide shoe	MCC 1200, ultra high molecular weight polyethylene, for good wear and abrasion resistance with a molecular weight exceeding 9 million g/mol. Colour: black
Tubes in CIP-curves	Stainless steel AISI 303 (Werkstoff Nr. 1.4305)
Nozzles in CIP-curves	Stainless steel AISI 303 (Werkstoff Nr. 1.4305)
Tab curves	MCC 1003, ultra high molecular weight polyethylene, for good wear and abrasion resistance with a molecular weight exceeding 1 million g/mol
- inserts (optional)	Brass
